Continuation of 5. does NOT place the application in condition for allowance because: Applicant asserts that the Arita reference does no disclose the step of :magnifying and displaying said selected button"

In Fig. 24 (C), Examiner respectfully points out that Arita dicloses magnifying (enlarging the size of a button) and displaying said selected button by implementing a "change of display size according to sales" is directed by a button with the use of the input unit so that the display sizes of individual buttons are redisplayed in proportion to sales. For example, the individual button "Tokyo" whose sales are the greatest can be displayed at the forefront (topmost) in the largest size, thereby enabling the user to more quickly find individual button whose sales are great (col.11 Lines 15-45, co1.20 line 32 to co1.21 line 65 and col.24 line 44 to col.25 line 21).

Applicant asserts that the Shindler reference does not disclose magnifying only a selected button into a predetermined size in longtitudinal and lateral directrions.

Examiner does not cite the Schindler reference for teaching the limitation. In fact, the combination Arita and Gasperina discloses the Applicant's limitation (magnifying only a selected button into a predetermined size in longtitudinal and lateral directrions) (see the Final Office Action mailed on 5/17/2004).
